Call for Papers

Page 1/5

Overview Advances in computer graphics have made visual media the heart of the user interface, and it is clear that graphics will continue to play a dominant role in knowledge work, entertainment, and the home. Indeed, as computers become more and more pervasive, as display sizes both increase and decrease, and as novel surface computing applications are conceived, new and challenging problems arise for the effective use, generation, and interpretation of computer graphics. The International Symposium on Smart Graphics will bring together researchers from Computer Graphics, Visualization, Graphic Art & Graphic Design, Cognitive Psychology and Artificial Intelligence, all working on different aspects of computer-mediated, computer-generated, or computer-interpreted graphics—and the user experiences they enable. This year’s meeting will be held in Bremen, Germany.

Smart Graphics Graphics become “Smart Graphics” when:

- Their design incorporates (and sometimes informs) a deeper understanding of human perception, cognition, and action in the form of design practice and/or cognitive science.
- Artificial intelligence drives the creation and interaction with graphics, often incorporating principles from graphic design and the cognitive science of visual representations.
- Graphics are designed to effectively support human cognition, communication, and collaboration, for example in the new field of visual analytics.

Scope Smart Graphics is grounded in a deep understanding of human abilities, activities, and desires. This understanding arises through the integration of fields such as art, design, and the social, cognitive, and perceptual sciences. Insights are realized in the form of novel methods for producing and interacting with rich graphical displays—often utilizing established techniques from Computer Graphics, Artificial Intelligence, and Computer Science in general. Such interfaces present content that

- engages the user and is aesthetically satisfying,
- participates in human cognition as external or distributed representations,
- is sensitive to the real-time demands of the interaction in the context of the available computational resources, and
- adapts the form of the output according to a wider set of constraints such as an individual’s perceptual, attentive, and motor abilities and the nature of the presentation media and available interaction devices.

Call for Papers

Page 2/5

Scope Smart Graphics research can be loosely divided into principles, methods and systems based research, and the symposium will encourage submissions in all (ctd.) these areas, based on the following characterization:

- **Principles:** Principles of Smart Graphics include: theories of graphics design and visual aesthetics, and theories of graphical representations and interaction, design and testing of graphical systems, constraints on technological, computational and human (perceptual, cognitive and motor) resources, conceptualizations of graphics and interactive systems, representation and reasoning requirements for Smart Graphics, interaction between resource restrictions, design, requirements capture and evaluation methodologies, systems that make people smart.
- **Methods:** New approaches to the design and testing of graphical generation, presentation and interaction for both conventional desk-top systems and new devices and media, acquisition and representation of design knowledge for Smart Graphics generation, empirical methods in the characterization of interaction, dealing with heterogeneous target media, application of planning, decision theory, optimization, constraint satisfaction, machine learning and other AI techniques to Smart Graphics, attentive systems, evaluation methods.
- **Systems:** The application of Smart Graphics to visualization, virtual reality, augmented reality, mobile communications, wearable computing, graphical hypermedia, web-based systems, novel interaction techniques (e.g. attentive systems, haptic and natural language interaction), and advisory & tutoring systems.

SG '11 welcomes submissions from computer graphics, HCI & AI researchers and practitioners, cognitive scientists, graphic artists and graphic designers. We specially encourage young researchers to submit their ideas and results.

Call for Submissions In 2011, we propose a specific emphasis on the integration of scientific research into the design of intelligent, context-aware digital media applications. In particular, we encourage discussion of research that pertains to interactions within the everyday world, using smart graphics and responsive media to enrich and augment experiences, culture, leisure, and work.

Call for Papers

Page 3/5

Call for Submissions Submission categories are divided into:
(ctd.)

- Full research papers: these will encompass comprehensive descriptions of original work within the scope of the symposium (limited to 12 pages in Springer LNCS format).
- Posters: tentative or preliminary results of research or design work with emphasis on the interdisciplinary evaluation of the ideas (limited to 4 pages in Springer LNCS format). Poster papers will be included in the proceedings.
- System demonstrations: short descriptions of research or design work that the authors intend to show and discuss in a demo session at the symposium (limited to 2 pages in Springer LNCS format). System demonstration papers will be included in the proceedings.
- Arts track: computer animations, multimedia performance, interactive art, etc. Artists must submit a three page proposal outlining the concept and technique of the artwork, including a discussion of the relationship between smart technologies and their artistic and creative practice.
- An international jury of renowned scientists and artists will select the submissions. Selected works will be displayed during the Smart Graphics symposium, and presented to the public via an evening of performance, installation, and gallery exhibition at the compArt Center of Excellence Digital Art. A report of the arts track including all the selected works will be included in the proceedings.

Topics Topics of interest include (but are not restricted to):

- computer graphics
- artificial intelligence
- cognitive science
- scene perception
- graphical abstraction
- graphics design
- virtual and mixed reality
- entertainment computing
- computational aesthetics
- information visualization
- visual analytics
- multimodal interfaces
- context-aware interfaces
- non-desktop interfaces
- surface computing
- sketch-based interfaces
- interaction design/user experience
- human-computer interaction
- interaction science
- user studies

Call for Papers

Page 4/5

Authors' Instructions As in previous years, proceedings will be published in the Springer Lecture Notes in Computer Science (LNCS) series. Therefore, submissions are expected in the Springer LNCS format. You will find instructions for the preparation of your papers at Springer's Authors' Instructions page:
<http://www.springer.com/computer+science/lncs?SGWID=0-164-6-793341-0>

Important Dates

March 14, 2011	Submissions due (extended: March 28)
April 11, 2011	Notification of results
April 25, 2011	Camera-ready copy due
July 18–20, 2011	Symposium in Bremen, Germany

Submission In order to submit your anonymized paper for the double-blind peer review process, please follow the instructions at <http://www.smartgraphics.org/>.

Organizing Committee

- Lutz Dickmann (University of Bremen)
- Gerald Volkmann (University of Bremen)
- Rainer Malaka (University of Bremen)
- Susanne Boll (University of Oldenburg)
- Antonio Krüger (DFKI/Saarland University)
- Patrick Olivier (University of Newcastle)

Advisory Board

- Andreas Butz (University of Munich)
- Brian Fisher (University of British Columbia)
- Marc Christie (University of Nantes)

Program Committee

Elisabeth André	Jörn Loviscach
Marc Cavazza	Boris Müller
Yaxi Chen	Frieder Nake
Luca Chittaro	Bernhard Preim
David S. Ebert	Mateu Sbert
Tracy Hammond	Tevfik Metin Sezgin
Marc Herrlich	John Shearer
Phil Heslop	Robyn Taylor
Hiroshi Hosobe	Shigeo Takahashi
Christian Jaquemin	Roberto Théron
Gesche Joost	Benjamin Walther-Franks
Tsvi Kuflik

Supporting Organizations Hosted by the TZI Center for Computing and Communication Technologies at the University of Bremen, the 11th International Symposium on Smart Graphics is presented in cooperation with the following organizations:

- ACM Special Interest Group on Computer Graphics and Interactive Techniques (ACM SIGGRAPH),
- ACM Special Interest Group on Computer Human Interaction (ACM SIGCHI), and
- ACM Special Interest Group on Artificial Intelligence (ACM SIGART),
- Association for the Advancement of Artificial Intelligence (AAAI),
- Eurographics Association (EG).

Proceedings As in previous years, the Smart Graphics proceedings will be published in the Springer Lecture Notes in Computer Science (LNCS) series.
